

What materials is it made from?

What effects do the materials create?

How do you think it has been joined together?

What do you think of the sculpture?

Today you are going to be using 'found' materials to create a small model of your sculpture.
This is called a maquette.

What materials could you use?

How many different ways can you think of for joining different materials together?

How could you manipulate the materials to suit your purpose?

Sketch your model:

What materials did you use?

How did you cut, shape or join the materials?

How could you improve your model?
