

Science Week 1

L.I. to describe how the human circulatory system works.

Watch the following clip and complete the activities.

<https://www.bbc.co.uk/bitesize/topics/zwdr6yc/articles/zs8f8mn>

Using the Snap Science template complete a diagram of the human circulatory system.

Can you add more about what happens to the blood in the lungs and rest of the body.

What the difference is between the blood on the right side of your diagram and the left?

What are veins and arteries?

What might happen if there were a blockage in a vein or artery?

Can you find out the names of any more parts of the circulatory system and add them to your diagram?
