

Winter in a bottle, jar or container

Jar, bottle, box or container

Leaves, twigs, stones, moss

Once you have your container go and explore!

1 Collect natural resources from the garden, woodland, pavement
(use my picture to help find things you might need).

Indoors/outdoors

2 Next place newspaper or an old sheet on the floor and display your
winter treasures (the natural resources you have found)

3 Then start to place your woodland/ garden treasures inside your chosen
container.

4 Close the lid or cover your container, stand back and take a look at your
winter display.

5 Now open it up and smell.

What can you smell? Did it smell like the outdoors?

Extension activity— Grab a piece of paper and pencil and write
down words to describe what 's in your container.

Example ...**dry twigs, brown leaves**

You could also leave your container sealed and come back to
it each day observing any changes. Inside you have created a
mini eco system, see what happens.

Remember when you are outside ...**Stop, Look, Listen and
Smell**

If its safe close your eyes it makes your ears work harder.

Sit down on the floor and enjoy the feel and the smell of your
surroundings.

Look at the trees, find shapes in the clouds.

Most importantly, when you 're allowed, **get dirty!**

Good Luck Year 1, hope you enjoy your Forest school activity.

Can 't wait to receive your photographs .
